Dear Wallet draft design spec

Nov 6, 2026 · @Lisa van Zyl

This draft defines a cute, soft Y2K app where Jazmine logs things she chose not to buy, sees what she kept, and writes a few lines about how money feels.

Product

The app makes not buying something feel like a small win, and it takes under 10 seconds to record one. It has two jobs from Jazmine's brief: tally what she kept by day, week and month, and hold a short diary about how she feels about money.

Audience: Jazmine first. She has ADHD, so the design favours fast starts, instant rewards and no penalty for gaps. She is a content creator who makes TikToks about everything she wanted to buy but didn't, and the things she loved each month, so the app should feed that content. The custom look matters because it has to feel like hers. The same design should still work for a public launch later.

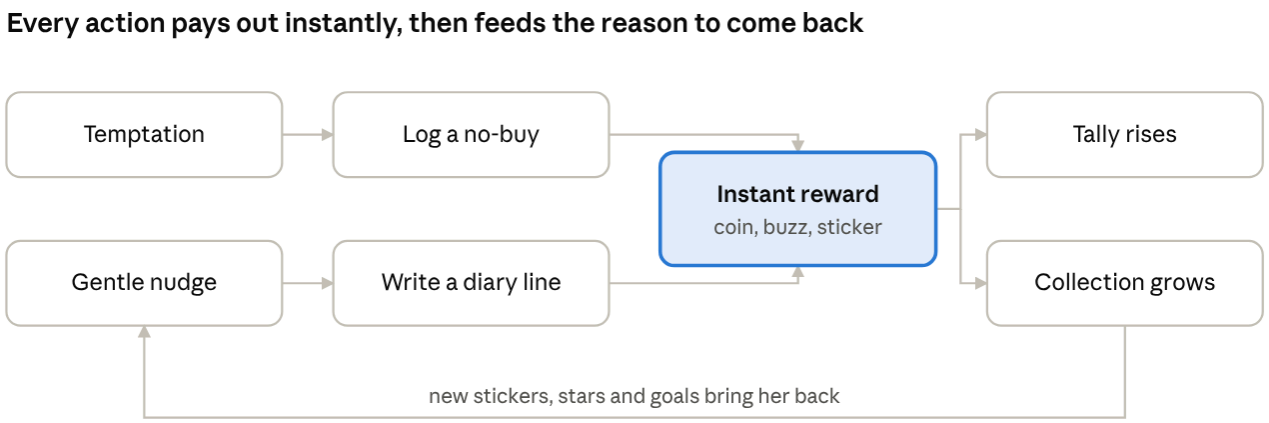

Design rules every feature follows:

1. **One thumb, 10 seconds.** Logging needs only an amount and a name. Category, note and photo are optional.
2. **Reward first.** Every completed action gets a visual, sound and haptic response straight away.
3. **No shame.** Nothing is lost for a missed day or for buying the thing after all. The app never says "failed", "broke" or "overspent".
4. **Out of sight is out of mind.** The home screen always shows the next easy thing to do, because she may forget the app exists.
5. **Novelty is a feature.** Small surprises and things to collect keep the app interesting after the first few weeks.
6. **Private by default.** Diary entries are hers. Nothing is social or shared unless she chooses it.

A note on wording: the app counts money not spent, which is not the same as money sitting in savings. This draft calls the tally "kept" and offers two subtle optional tags, "moved to savings" and "paid off debt", so the number stays fun and honest.

Core loop

Logging and diary writing are separate actions that lead to the same reward, so either one counts as showing up.

core loop · two ways in, one reward

Features

The first version covers Jazmine's two asks plus just enough reward to bring her back. Anything that adds setup or admin waits until she has used the app for a few weeks.

Feature	What it does	Version
Quick log	Amount and item name from a big button on every main screen, with one-tap recent amounts. Category, note and photo are optional extras	First
Kept tally	Totals for today, this week, this month and all time, updated instantly	First
History	Scrollable list of logged items, grouped by day, with edit and delete	First
"Bought it after all"	Marks an item as bought and removes it from the tally, with a kind message and no penalty	First
Savings and debt tags	Optional "moved to savings" or "paid off debt" tag on any item, shown as a quiet side total	First
Loved list	Logs things she bought and loved, with an optional photo, kept separate from the tally	First
Recap cards	Weekly and monthly "wanted but didn't" and "loved" lists with photos and totals, saved as 9:16 cards for her videos. The monthly one looks like a CD with a track list	First

Feature	What it does	Version
Finance diary	A few sentences at a time, with an optional mood sticker and a rotating prompt	First
Diary calendar	Month view showing logged days and mood stickers at a glance	First
Rewards	Coin drop, tally roll-up, haptic, chance of a sticker, see Gamification	First
Sticker album	Collection of everything she has earned	First
Sticker decorating	Drag, resize and rotate earned stickers on diary pages	First
Milestones	Celebrations at set totals and logging counts	First
One goal	"I'm keeping money for ___", with a progress bar	First
Gentle nudge	One weekly check-in at a time she picks, easy to turn off	First
Palette switcher	Colour palettes in Settings, applied across the app instantly	First
App lock	Face ID or passcode to protect the diary	First
Think-about-it pile	Park a want for 24 hours or 7 days, then answer "still want it?"	Next
Share to app	Send a product from a shopping app or browser straight into a log	Next
Home screen widget	Shows the kept total and opens quick log	Next
Voice diary	Record a short voice note instead of typing	Later
Patterns	Shows when and what tempts her most, for example late-night scrolling	Later
Extra goals	More than one goal at a time	Later
Mascot and messages	A small character and surprise inbox messages	Later

Gamification

Rewards pay for the action, never for the amount or for perfect attendance. A $2 coffee earns the same celebration as a $200 pair of shoes, so small wins count and there is no reason to inflate entries.

Mechanic	How it works	Why it suits ADHD
Instant payoff	Every log or diary line triggers a coin drop, sparkle burst, tally roll-up and haptic within 300 ms	The reward lands before her attention moves on
Surprise stickers	About 1 in 3 actions drops a sticker, with rare holographic ones	Unpredictable rewards hold interest longer than fixed ones
Sticker decorating	Earned stickers can be placed on diary pages, so rewards become something she uses	Gives a playful, low-effort reason to open the diary
Star calendar	Each day she logs, writes or decorates earns a star. Stars stay forever and never reset	Shows progress with nothing to lose after a missed week
Daily mini quest	One tiny optional task such as "write one line" or "add a sticker to a page". It never needs a temptation to complete	Gives a clear, small starting point
Milestones	Big full-screen moments at totals and counts, with comparisons such as "that's 3 concert tickets"	Makes an abstract number feel real
Unlocks	Milestones unlock sticker packs, palettes and sounds	Regular novelty keeps the app fresh

Avoid:

- Consecutive-day streaks. One missed day can feel like total failure, and people often quit after that.
- Lost points, or anything that looks sad or disappointed.
- Guilt-based notifications, such as "you haven't logged in 3 days".
- Long onboarding, required fields or budget setup.
- Rewards that take several steps to claim.
- Leaderboards or comparison with other people.

Aesthetic

The app should feel like a 2004 flip phone desktop floating in a pastel cloud: soft, sparkly and handmade, with retro computer windows holding the content. It should be sweet without feeling childish, because the subject is her real money.

Reference	Take from it	Leave out
Y2K Cloud Alarms	Cloud-shaped list cards, one colour per row, pill toggles, CDs, flip phones and butterflies as border decoration	Dense decoration around every screen
Messages, Playlist, Settings	Retro windows with a checker title bar, heart at left and X at right, clouds behind	Very low contrast lilac text
Email Inbox	Star rows for item lists, title bar controls, blue checker cloud shape	Empty placeholder rows
Pretty in Peach	Browser tab header, bottom taskbar with the time, grid paper background, paperclips, outlined duotone icons	The desktop layout, which won't fit a phone
Two palette cards	Colour sets and the four-point sparkle	Tone-on-tone text, which is too faint to read

The references are for mood only. All artwork, icons, stickers and the mascot should be original, and the "NYNÄ" and "Peachisty" branding stays out.

Visual language

- **Shapes:** rounded windows, cloud cards, chunky pill buttons, 2 px outlines and soft pastel gradients.
- **Patterns:** checkerboard for title bars and borders, grid paper for backgrounds, scattered sparkles at low density.
- **Motif set:** flip phone, CD, butterfly, heart, star, four-point sparkle, cloud, coin.
- **Icons:** pixel outline icons with a flat fill. Pixel art carries the charm, and smooth vector shapes carry the layout.
- **Holographic shimmer:** reserved for rare moments such as rare stickers, CDs and milestones, so it stays special.
- **Decoration limit:** the top of a screen can be playful, but the main task area stays clean. She should find the log button instantly. Diary pages are the exception, because they are hers to fill with stickers.

Type

Role	Font	Use
Script accent	Pacifico	Screen titles, diary headings, milestones and recap titles, at 20 pt or larger and only a few words at a time
Sans serif	Nunito	Buttons, diary text, prompts, forms, anything longer than a few words
Pixel detail	Pixelify Sans	The big tally number, window title bars and small tags

The lead pairing is script with sans serif, matching what Jazmine uses in her content, and pixel type keeps the Y2K detail. Pacifico stays legible on pastel colours at phone sizes. Satisfy is the lighter alternative if she prefers something more delicate. Amounts always use Pixelify Sans or Nunito, never script.

Motion and feedback

- Motion is springy and short, mostly 150 to 300 ms. Windows pop open, cards bounce and coins drop.
- The tally rolls up like an old digital counter.
- Haptics confirm every completed action. Sounds are tiny chiptune blips and keypad tones.
- Settings include sound, haptics and reduced motion. Reduced motion swaps animation for a simple fade and keeps the reward visible.

Voice

Copy sounds like a sweet text from a best friend in 2004: short, warm, lightly lowercase and never preachy. Text-speak stays light so it remains easy to read.

Moment	Example
Logged	nvm! $24 stays with u ♡
Bought it after all	all good. u still paused, and that counts.
Gentle nudge	psst. anything tempt u this week?
Empty day	no temptations today? iconic.
Diary prompt	how's ur wallet feeling today?
Milestone	$500 kept. that's actually huge.

Colour palettes

The app launches with six palettes, with Cloud Candy as the default. Settings presents them as swappable phone faceplates, and tapping one recolours the app instantly.

Palette	Source	Background gradient	Cards	Surface	Outline	Text	Button / button text
Cloud Candy	Alarms reference	`#F6CDEB` to `#C6EFDD`	`#FDD2EE` `#E1D5FD` `#FDEFC0` `#B4F2DD` `#ADD9FE`	`#FFFFFF`	`#4A72A8`	`#2E2F73`	`#4A72A8` / `#FFFFFF`
Lilac Sky	Inbox and Messages references	`#E1CBF2` to `#B9E6EC`	`#DBCEF8` `#CBC3F6` `#88C8F6` `#FAD6EE`	`#FFFFFF`	`#5F52B8`	`#3A2A66`	`#6F60C8` / `#FFFFFF`
Peach Fuzz	Periwinkle and peach palette card	`#B8B8FF` to `#FFD8BE`	`#FFEEDD` `#FFD8BE` `#B8B8FF`	`#F8F7FF`	`#5F4FD6`	`#3A2A66`	`#6F5CE8` / `#FFFFFF`
Peach Soda	Pretty in Peach reference	`#F9D2CC` to `#FAC7C3`	`#FFEEDD` `#FAC7C3` `#E4D6F2`	`#FFF6F2`	`#835AA5`	`#4B2A7B`	`#835AA5` / `#FFFFFF`
Orchid Pop	Orchid and lime palette card	`#FFEAFC` to `#BEDA62`	`#FFEAFC` `#FAC75A` `#BEDA62` `#9D96FF`	`#FFFFFF`	`#8E1E78`	`#5B1E58`	`#C936AE` / `#FFFFFF`
Midnight CD	New dark option	`#1C1838` to `#2A2350`	`#332B60` `#3F3574`	`#2A2350`	`#B8B8FF`	`#F8F7FF`	`#FFD8BE` / `#1C1838`

Reference colours were sampled from the images, so treat them as close starting points. Text, outline and button colours are new, because the palette cards' tone-on-tone text is too faint: lime on lavender measures only 1.38:1 and periwinkle on peach 2.32:1.

With these values, text reaches at least 4.5:1 on every background, card and surface in its palette. Outlines reach at least 3:1 and button text at least 4.5:1, which meets WCAG AA. Keep these pairs when adjusting colours.

Screens

Claude Design should start with the home screen, quick log and reward moment, because together they prove the concept. The bottom taskbar has Home, Tally, a large centre log button, Diary and Collection, and Settings opens from Home.

Screen	Must show	Key states
Home	Kept today and this month, daily mini quest, goal progress, Settings	First day, nothing logged today, active day, quest completed
Quick log	Bottom sheet with a "didn't buy" or "loved it" switch, amount pad, recent amounts, item name, optional category, note and photo, and one big "nvm!" button	Empty, filled, photo added, offline
Reward moment	Coin drop, tally roll-up, sparkle burst, then a sticker if one dropped. Tap anywhere to dismiss	Plain reward, sticker, rare sticker
Tally	Day, week and month switcher, simple pastel bars, item list, all-time total and a quiet savings and debt side total	No logs yet, quiet week, busy month
Item detail	Photo, name, amount, date, category, note, savings and debt tags, "bought it after all", edit and delete	Kept, bought, tagged, no photo
Loved list	Photo-led list of things she bought and loved, opened from Tally	Empty, filled month
Recap	Weekly or monthly list and a 9:16 card preview, with save and share. The monthly CD shows items as a track list	Wanted, loved, quiet month, big month
Diary	Calendar with mood stickers and a list of recent entries	Empty, partly filled month
Diary entry	Mood stickers, optional prompt, short text box and save button, styled as a retro window	New, editing, saved reward
Decorate page	Diary page with a sticker tray. Drag, resize, rotate and remove stickers	Blank page, decorated page, tray empty
Collection	Sticker album, sticker packs, milestones and stars	Mostly empty, partly filled, locked pack

Screen	Must show	Key states
Milestone	Full-screen celebration with the amount and a real-world comparison	Unlocks a sticker pack or palette, no unlock
Goal	Goal name, target amount, progress and an edit option	No goal, in progress, reached
Settings	Palettes, sound, haptics, reduced motion, reminders, currency, app lock, data export, account	Locked and unlocked palettes
Onboarding	Three screens at most: welcome, choose a palette, log the first thing	Skip option on each screen
Sign in	Simple account creation or sign-in	Error, loading
App lock	Unlock screen shown before the diary or whole app	Face ID, passcode fallback

Ask Claude Design for:

1. A component set: window, cloud card, button, pill toggle, amount pad, taskbar, sticker and sparkle burst.
2. Colour tokens for all six palettes, shown on the same key screens.
3. Mobile frames at 390 x 844 pt, plus a check on a smaller 375 x 667 pt phone.
4. Motion notes for the reward moment and milestone screen.
5. An app icon, splash screen, starter sticker set and a 9:16 recap card at 1080 x 1920 px.

Mock data uses US dollars and neutral sample items such as bubble tea, shoes and a phone case.

Build constraints

The app is React Native with Expo and Supabase, and the Next.js site comes later. It supports iPhone and Android, but Jazmine uses an iPhone, so design and test there first. These constraints affect how the design should be made.

- **Themes:** every colour must come from a shared token, so a palette swap works at runtime with no hardcoded colours.
- **Icons and decoration:** interface icons need to be recolourable SVGs. Stickers can keep fixed colours because they are collectibles. Each sticker placed on a diary page needs its position, size and rotation saved.

- **Patterns:** checkerboards, cloud shapes and window frames should stretch or repeat cleanly on different screen sizes.
- **Effects:** gradients, shimmer and coin animations should run smoothly on mid-range Android phones. Keep rare effects short and few in number.
- **Fonts:** script and pixel fonts are bundled with the app, and pixel type should be used at sizes that keep its edges crisp.
- **Offline:** logging and diary entries save locally first and sync later, so these flows have no loading spinners. Photos upload in the background.
- **Privacy:** Supabase row-level security keeps each user's records private. The diary is treated as sensitive, and export and delete options are required before any public launch.
- **Accessibility:** tap targets are at least 44 pt, text scales with phone settings, and reduced motion is supported.
- **Website later:** keep the logo, tokens and illustrations reusable for the Next.js site.

Name

The app is called **Dear Wallet**, because it says diary and money in two words and gives every entry a cute opening line. "nvm" is the log button, so the core action still has a Y2K voice.

Name	Why it works	Watch out for	Search result
Dear Wallet	Covers both the diary and the money, warm and easy to say	Slightly less Y2K than the others	No matching app found
Keepsies	Playful, matches the "kept" tally and sticker collecting	Doesn't explain the app by itself	No matching app found
nvm	Short for "never mind", which is exactly the action, and very 2004	Hard to search for, and developers know it as Node Version Manager	No matching app found
Wishcloud	Wanted things float away, and it suits the cloud style	Sounds more like a wishlist than a savings app	No current app found
Not2day	Early-2000s spelling and a clear no	Can be misread, and it doesn't suggest a diary	No matching app found
Sparkle Bank	Cute and instantly about money	Might suggest a real bank, and Sparkle already exists in banking	Close match, avoid

Name	Why it works	Watch out for	Search result
ByeBuy / Nope	Fun and clear	Both are taken by apps in this space: ByeBuy, BuyBye and Nope	Avoid

These were web searches, not App Store, trademark or domain checks. Run those for Dear Wallet before launch. The other names stay here as alternatives.

This is already a busy category: Impulse Log targets ADHD users, while Almost and BuyBye use mascots and rewards. A public launch would need to stand out through the diary, the no-shame approach and the Y2K world.

Questions for Jazmine

Seven of the 20 questions now have answers, based on what Lisa knows so far. Questions 2, 18 and 20 matter most next. Claude Design can work from the remaining assumptions until Jazmine answers.

#	Question	Draft assumes	Answer
1	Have you tried a budgeting or tracking app before? What made you stop?	The app must be personal to her aesthetic and fit what she already tracks	Yes. A custom app can match her look and what she tracks for TikTok: things she wanted but didn't buy, and things she loved
2	Where do you usually get tempted: in shops, scrolling online or both?	Both	
3	Would you log it right away, or remember at the end of the day?	Logs when something comes up, not daily	Logs when something comes up. Something may not tempt her every day
4	Would a weekly check-in help or annoy you? What day and time is best?	One weekly check-in at a time she picks	
5	When logging, is an amount and name enough, or do you want a photo, category or note too?	Category, note and photo are optional	Category, note and photo are good optional extras

#	Question	Draft assumes	Answer
6	Is the total a fun "look what I didn't spend" number, or do you want to actually move that money into savings?	Fun number, with subtle savings and debt tags	Mostly fun, with subtle "moved to savings" or "paid off debt" options
7	Would you like to aim for something specific? What would it be?	One optional goal	
8	If you end up buying it later, what would feel okay in the app?	Mark as bought, remove it from the total, kind message	
9	Would a "think about it" pile help, where the app asks a day or a week later if you still want it?	Comes in the next version	
10	For the diary, would you rather type or send a voice note? Do you want a prompt or a blank page?	Typing, with an optional prompt	
11	Would picking a mood sticker with each diary entry be nice or one job too many?	Optional sticker	
12	Do streaks motivate you, or do you feel bad when you break one?	No streaks, stars that never reset	No streaks, stars that never reset
13	Which sounds most fun: collecting stickers, decorating a phone or room, looking after a little character, or surprise messages?	Collect stickers and decorate the diary	Collecting stickers, then using them to decorate the diary
14	Is your phone usually on silent? Would you want little sounds, or just vibration?	Vibration on, sounds optional	

#	Question	Draft assumes	Answer
15	Which reference look or colours do you love most? Should every palette be free from day one, or do you want to unlock some?	Cloud Candy first, three free and three unlocked	
16	Would you want the diary or whole app locked with Face ID?	Offer it when she writes her first entry	
17	Which currency do you use, and do you have an iPhone or Android?	USD, iPhone	USD, iPhone
18	For your videos, do you want a finished 9:16 card, a plain list to work from, or both? Weekly, monthly or both?	Both formats, weekly and monthly	
19	Which script fonts do you use most in your content?	Pacifico, with Satisfy as the lighter option	
20	What goes on your loved list: only things you bought, or also songs, places and experiences?	Anything, with an optional photo and no price needed
